

GUIDE FOR COACHES

The Montis coaching platform

What the Montis App gives you as a coach: a cockpit for your whole roster, an AI review that puts your athletes in order, a weekly workflow for each athlete with a report you can email, and their dashboards and tools at your fingertips.

Updated September 2026

Examples use made-up athletes and a made-up coach · Intervals.icu stays the source of truth · app.montis.icu

1 What you get

Coach your athletes in the Montis App at app.montis.icu. Each athlete keeps their own Intervals.icu account and shares it with you through a Montis invite link. Montis analyses their training and shows you everything in one place: who needs you this week, what each athlete did against the plan, and what comes next.

FEATURE	WHAT IT DOES
Coach Roster	Lists your athletes. Pick one and the whole app switches to them.
Coach Cockpit	A weekly overview of all your athletes, with the ones who need you first.
Cockpit AI roster review	The AI Coach reviews your whole roster and puts your athletes in priority order.
Coaching Workflow	One athlete's week in six sections, with a branded email report you can send them.
Session Intensity Lab analysis email	Send the athlete the AI Coach's analysis of one of their activities.
Everything else	Dashboards, Wellness, Athlete Profile, Workout Builder, AI Builder v2 and the rest, for the athlete you picked.

Who can use it

- Coaching needs an active **Montis Subscriber** membership. Athletes use Montis free.
- Athletes join with an invite link. The guide [Coaching athletes with Montis.icu](#) explains invites, branding and privacy.
- The AI features use the shared Montis AI key that comes with the Subscriber membership, up to its monthly allowance. You can also use your own Gemini key.

Where the numbers come from

Every number comes from the Montis coaching engine, which reads the athlete's Intervals.icu data. The AI Coach explains those results. It is told to use them as they are and not to recalculate them.

Intervals.icu stays the source of truth. Anything you plan or change for an athlete appears in their Intervals.icu calendar.

About the examples. Every screenshot in this guide uses made-up athletes (Lena Brandt, Marco Rossi, Sofia Lind, Tom Berger and Sam Carter) and a made-up coach, Anna Weber Coaching. The AI answers shown are examples.

2 Coach Roster and acting as an athlete

The Coach Roster lists the athletes who share their training with you. Pick one and the app switches to that athlete: you see their data, and the planning tools write to their calendar.

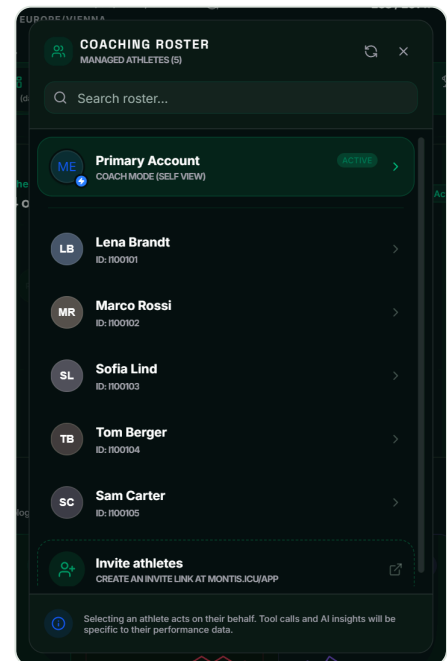

1 Open the roster

- In the sidebar, open **Coaches** → **Coach Roster**.
- The **Coaching Roster** panel lists your **Managed Athletes**. Search by name or ID in **Search roster...**
- The refresh icon loads the list again.
- **Primary Account** takes you back to your own data.
- **Invite athletes** opens the Montis hub at montis.icu/app, where you create invite links.

The **Coaches** menu is for Montis Subscribers. Without a Subscriber membership it shows a coffee cup instead, with a link to the membership.

2 Act as an athlete

- Click an athlete in the roster. The roster closes.
- The header shows **Acting as:** and the athlete's name.
- The app loads the athlete's latest reports and opens **Horizon Dashboard** → **Coaching**.
- You can also open an athlete from the Coach Cockpit by clicking their photo or name.

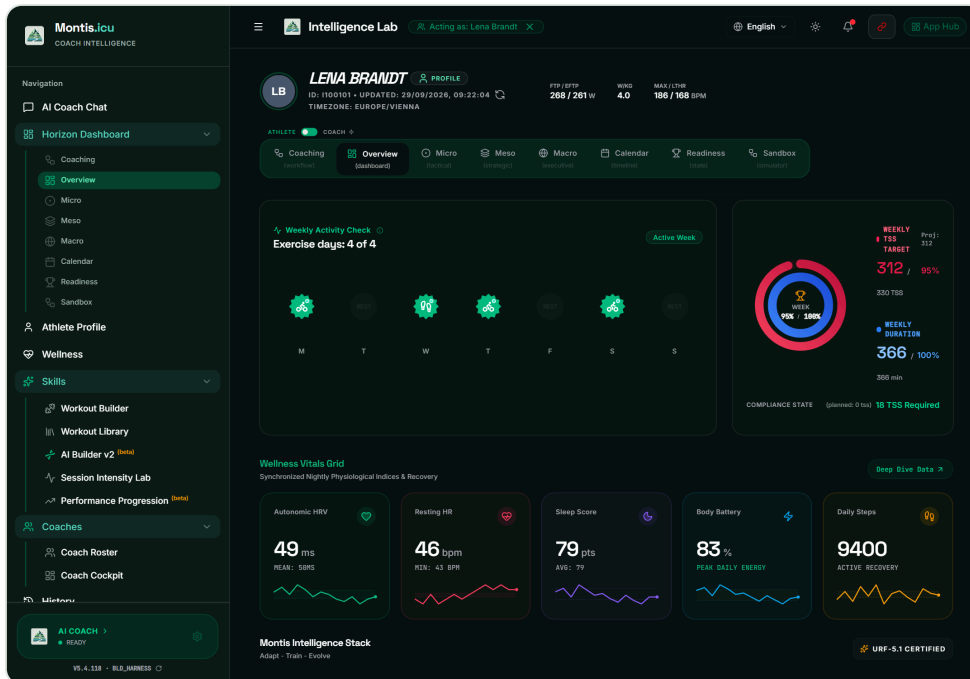

The Coaching Roster panel.

To go back to your own data, press the **X** on the **Acting as** badge, or choose **Primary Account** in the roster. On a phone the badge is hidden; the roster marks the athlete you're working on as **Active**.

What switches to the athlete

WHERE	WHAT YOU SEE
Horizon Dashboard	Coaching, Overview, Micro, Meso, Macro, Calendar, Readiness and Sandbox , all for the athlete
Athlete Profile	Their biometrics, physiology and sport settings
Wellness	Their Physiology Drill-Down: HRV, sleep, resting heart rate and more
Skills	Workout Builder, Workout Library, AI Builder v2, Session Intensity Lab and Performance Progression
History	Their saved history
AI Coach Chat	A separate conversation for each athlete. The AI Coach knows you are their coach.

Acting as Lena Brandt: the badge in the header, and her Overview dashboard.

The dashboard tabs

- **Coaching:** the athlete's week, with the email report (section 5).
- **Overview:** this week at a glance: sessions done, weekly load against the target, and the wellness vitals.
- **Micro:** the current seven days in detail.
- **Meso:** roughly the last three months (the season).
- **Macro:** the last year.
- **Calendar:** planned workouts ahead. Drag a workout to move it; click it to edit or delete it.
- **Readiness:** how ready the athlete is for a chosen event.
- **Sandbox:** what-if simulations.

The ATHLETE / COACH switch

The switch sits above the dashboard tabs. **COACH** adds AI Coach panels to the tabs (for example **Microcycle AI Coach**, **Forecast AI Coach** and **Readiness AI Coach**) and switches some views to a coach layout. It doesn't change which athlete you're working on.

Changing the athlete's calendar

While you act as an athlete, these actions write straight to their Intervals.icu calendar:

- **Workout Builder:** **COMMIT TO CALENDAR** and **SAVE CHANGES. DELETE WORKOUT**, then **CONFIRM DELETE**, removes a workout.
- **Calendar** tab: dragging a workout moves it at once.
- **AI Coach Chat:** **Add to Calendar** on a suggested workout.
- **AI Builder v2:** committing a plan first removes the existing workouts on the dates of the weeks you selected, then writes the new plan.
- **Coaching Workflow:** **Delete Target Event**, then **Confirm Delete**, removes a target event.

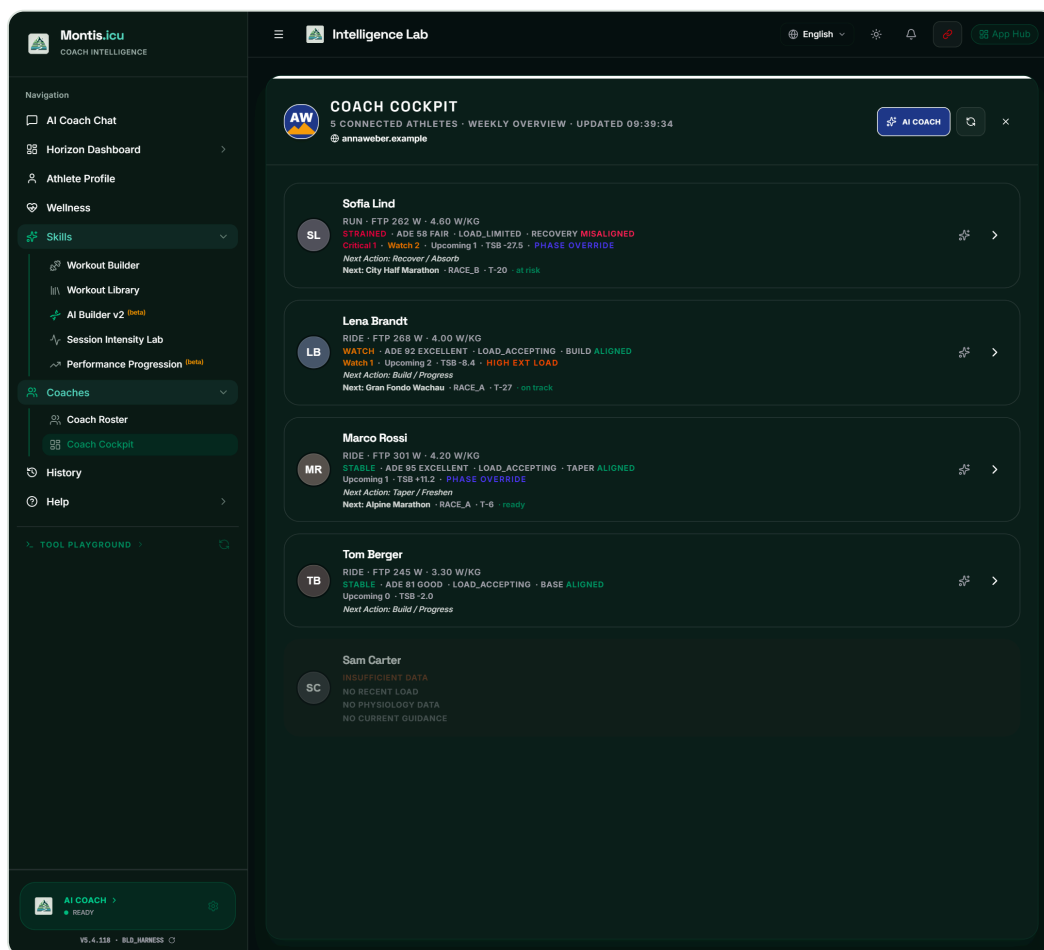

The AI Coach acts when you ask. The chat and the AI Coach panels can add, change or delete workouts, and send the athlete a message in Intervals.icu chat, when you ask them to. They don't ask you to confirm first, so say exactly what you want.

Changes show in the athlete's Intervals.icu straight away.

3 Coach Cockpit

The Coach Cockpit puts all your athletes' weeks on one page, with the athletes who need attention first.

- In the sidebar, open **Coaches** → **Coach Cockpit**.
- The header shows your logo and website (if you set them in the hub), the number of connected athletes, and when the overview was last updated.
- The cockpit shows up to 25 athletes. Montis keeps the overview in your browser for 24 hours; the refresh button fetches a new one.
- **AI COACH** opens the AI review of your whole roster (section 4).

The Coach Cockpit with five athletes: the athletes who need attention come first, and Sam Carter has no recent data.

The order

Athletes with data come first. Then the order is: most critical flags, most watch flags, weakest physiology, soonest event. Athletes without recent data come last, marked **INSUFFICIENT DATA**, and can't be opened.

Reading a row

1. **Sport · FTP · W/kg.**
2. The **physiology state** (for example **STABLE**, **WATCH** or **STRAINED**) in green, amber or red. Then the **ADE** score and label (Adaptive Decision Engine), the load state (for example **LOAD_ACCEPTING**), and the phase the athlete needs now with **ALIGNED** (green) or **MISALIGNED** (red) against their plan.
3. **Critical** and **Watch** flag counts, **Upcoming** events and **TSB** (form).
 - **PHASE OVERRIDE**: the athlete needs to taper or recover now, so that phase takes priority over the usual guidance. The Decision Engine card shows the required phase.

- **HIGH EXT LOAD:** environmental load, such as heat or climbing, was high this week. The External Context card has the details.

4. **Next Action** from the engine, and the next event: name, category (for example **RACE_A**), days to go (**T-27**) and readiness.

Buttons on a row

- **Click the row** to open the athlete's cards. The arrow shows whether the row is open.
- **Click the photo or name** to act as that athlete (section 2).
- **The sparkle button** opens a **Coach Review** of that athlete: the AI Coach reads their cockpit data and gives a decision, the reason, the evidence, a coach action and what to watch next.

The athlete's cards

Lena Brandt's row opened: nine cards from the Montis engine.

CARD	WHAT IT SHOWS
Tier 5 • Decision Engine	The engine's guidance for the week, the required phase, the forecast trend and whether a phase override is on.
Coach Flags	Each flag with its value, time window and the data it's based on. Red is critical, amber is watch. Positive flags sit under a fold.
Tier 1 • Load State	Hours, TSS and distance; CTL, ATL, TSB, ACWR, strain and fatigue trend; compliance with the weekly target.
Tier 2 • Autonomic Readiness	HRV ratio and trend, resting heart rate and its change, sleep score, what it means, and data coverage.
Tier 4 • System Progression	Required phase, alignment, plan pattern, current state, the last block and the phase streak.
Tier 3 • Cognitive Fitness	CTL, ATL and TSB in 14 days, load trend, fatigue class, and the next action with its reason.
Adaptation Profile	Adaptation state and bias, the power-curve profile, and each energy system's status.
Target Events & Schedule	The next target event (days to go, readiness, form, limiting factors) and the next upcoming events.
External Context	Only when there's data: dominant stressor, heat and environmental load index (7 days) and climbing rate (VAM).

Terms

CTL: fitness, the 42-day training load.

ATL: fatigue, the 7-day training load.

TSB: form, CTL minus ATL.

TSS: training stress score.

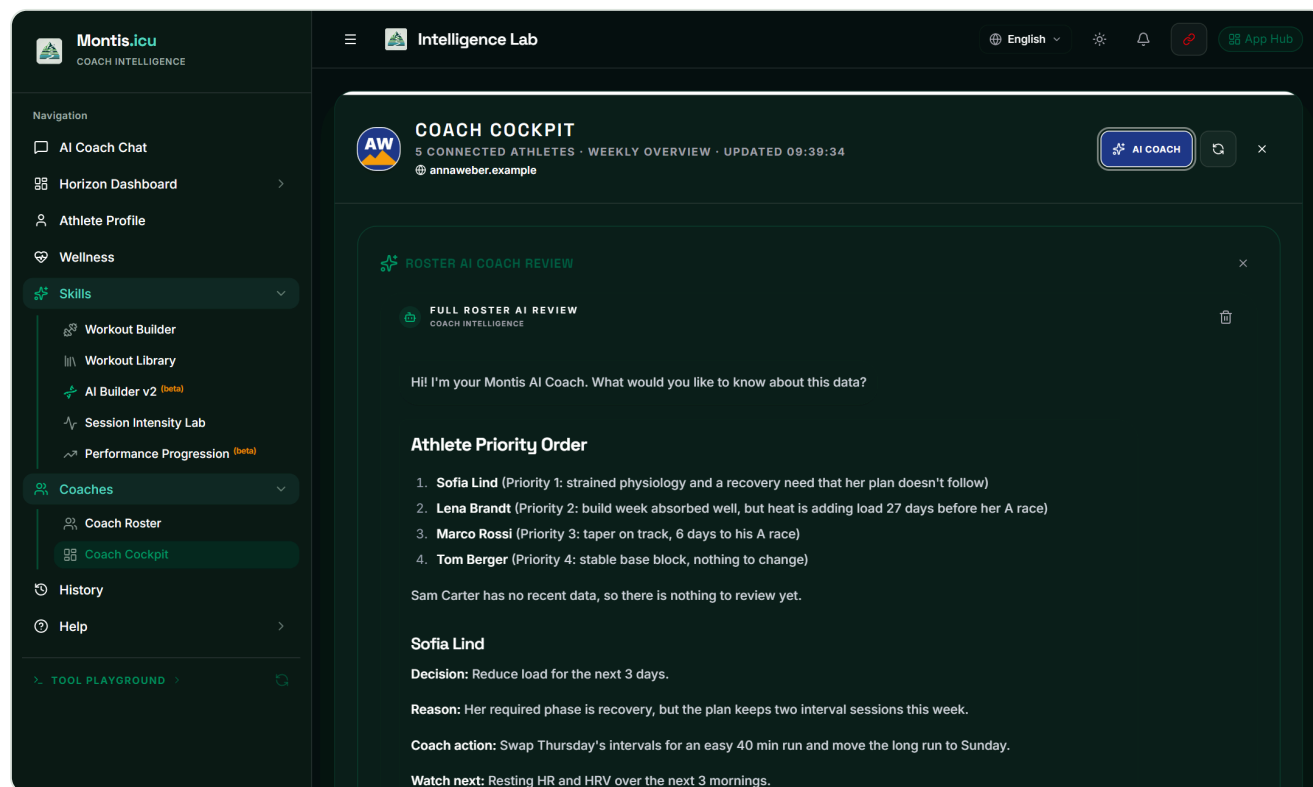

ACWR: this week's load against the longer-term load.

ADE: the Adaptive Decision Engine, which turns the data into the week's decision.

4 Cockpit AI roster review

The AI Coach reviews your whole roster from the cockpit data and tells you who needs you first.

- 1 Open **Coaches** → **Coach Cockpit**.
- 2 Press **AI COACH** in the cockpit header. The **Roster AI Coach Review** panel opens and the review starts by itself.

The roster review: priority order first, then a decision for each athlete, with key facts as chips. An example answer.

What you get

- For each athlete: **Decision, Reason, Evidence, Coach action** and **Watch next**.
- Your athletes in priority order.
- Key facts from the answer as chips. Click a chip to ask about it.

The AI Coach uses only the cockpit data. It is told not to recalculate readiness, risk, compliance, phase or training load. It answers in the app's language, and the review is written fresh from your athletes' data each time.

AI key and usage

- Subscribers use the shared Montis AI key, up to the monthly allowance of their membership. When the allowance runs out, the app asks for your own Gemini key.
- You can use your own Gemini key at any time: **Settings & API Key** (the gear on the **AI Coach** card).
- The **Adv** model needs your own pay-as-you-go Gemini key.

Keep going

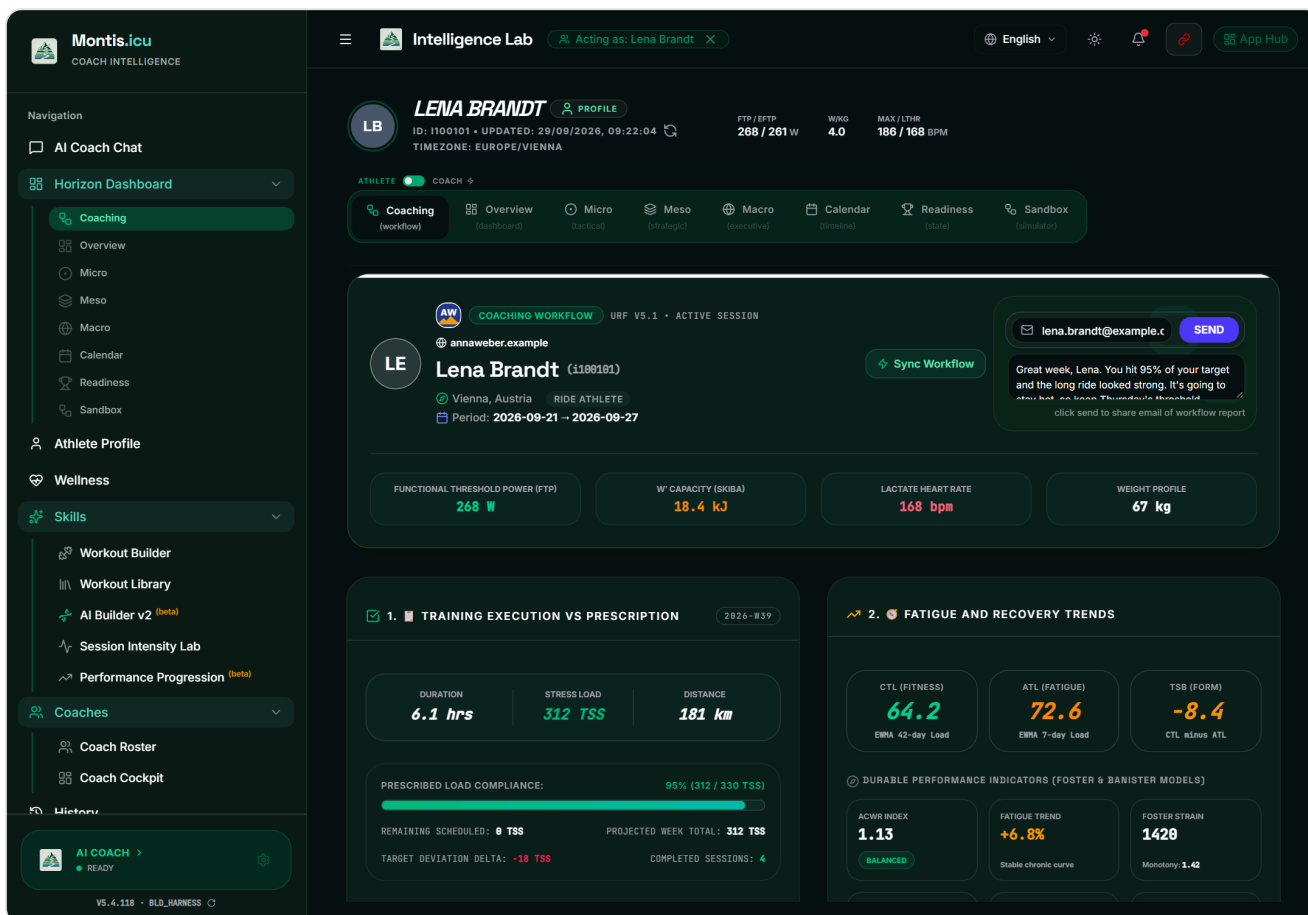

- Ask follow-up questions in **Message your Montis Coach....** While it answers, the AI Coach can look up more of your athletes' data with Montis tools.
- The copy button copies the answer. The retry button asks again. The bin clears the conversation.
- The model badge shows which Gemini model answered. It follows the **Lite, Flash** or **Adv** mode on the **AI Coach** card.
- The conversation stays in this browser for 24 hours.

5 Coaching Workflow and email report

The Coaching Workflow puts one athlete's week on one page, from what they did against the plan to what comes next. You can email it to the athlete as a report with your branding.

- 1 Act as the athlete (section 2).
- 2 Open **Horizon Dashboard** → **Coaching**. Subscribers land here when they pick an athlete.

The header shows the athlete, the report period, your logo and website, and the athlete's FTP, W' (anaerobic capacity), lactate threshold heart rate and weight. **Sync Workflow** reloads the athlete's latest weekly and wellness reports.

The Coaching Workflow for Lena Brandt, with the email box at the top right.

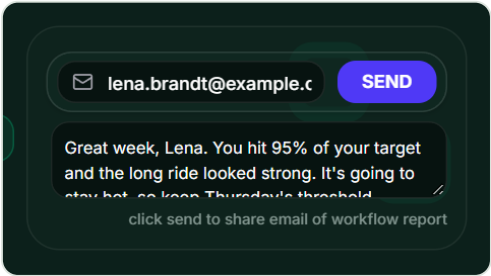

The six sections

SECTION	WHAT IT SHOWS
1. Training Execution vs Prescription	Hours, TSS and distance; compliance with the weekly target (green from 85% to 115%); remaining and projected TSS; planned weeks; completed workouts, each with Analyse (opens the Session Intensity Lab); planned sessions.
2. Fatigue and Recovery Trends	CTL, ATL and TSB; ACWR, fatigue trend, Foster strain and monotony, polarisation, ZQI and stress tolerance; metabolic indicators; the week's daily load; a 14-day fatigue forecast.
3. Athlete Readiness	Readiness balance; the engine's decisions and interventions; decision context and phase alignment; training guidelines and limits; target events.
4. HRV / Wellness	HRV (latest, 42-day mean and ratio), resting heart rate, sleep, the watch list and positive markers, environmental stressors.

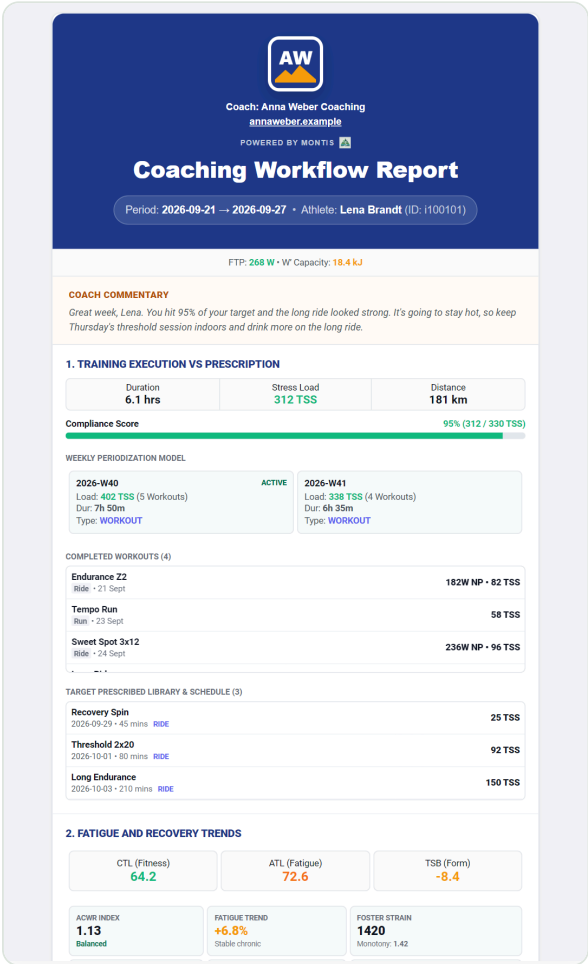

SECTION	WHAT IT SHOWS
5. Weekly Performance Progression	Adaptation state, power-curve changes, anaerobic repeatability, durability and neural load (WDRM, ISDM and NDLI), lactate thresholds (LT1 and LT2), the three-zone intensity split and the recent training phases.
6. Future Periodisation	The coming phases with projected hours, TSS, CTL, ATL and TSB. Change Periodisation opens AI Builder v2.

Send the email report

1. Check the address. Montis fills in the athlete's email, and you can change it.
2. Add a comment if you like. It goes at the top of the email as **Coach Commentary**.
3. Press **SEND**.

The email box.

The top of the Coaching Workflow Report, as Lena receives it.

What the athlete gets

- A header in your brand colour, with your logo, name and website. Without a brand colour it's Montis green.
- The period and the athlete, then FTP and W'.
- Your **Coach Commentary**.
- Sections 1 to 6, then **Coaching Verdict & Guidance**.

Good to know

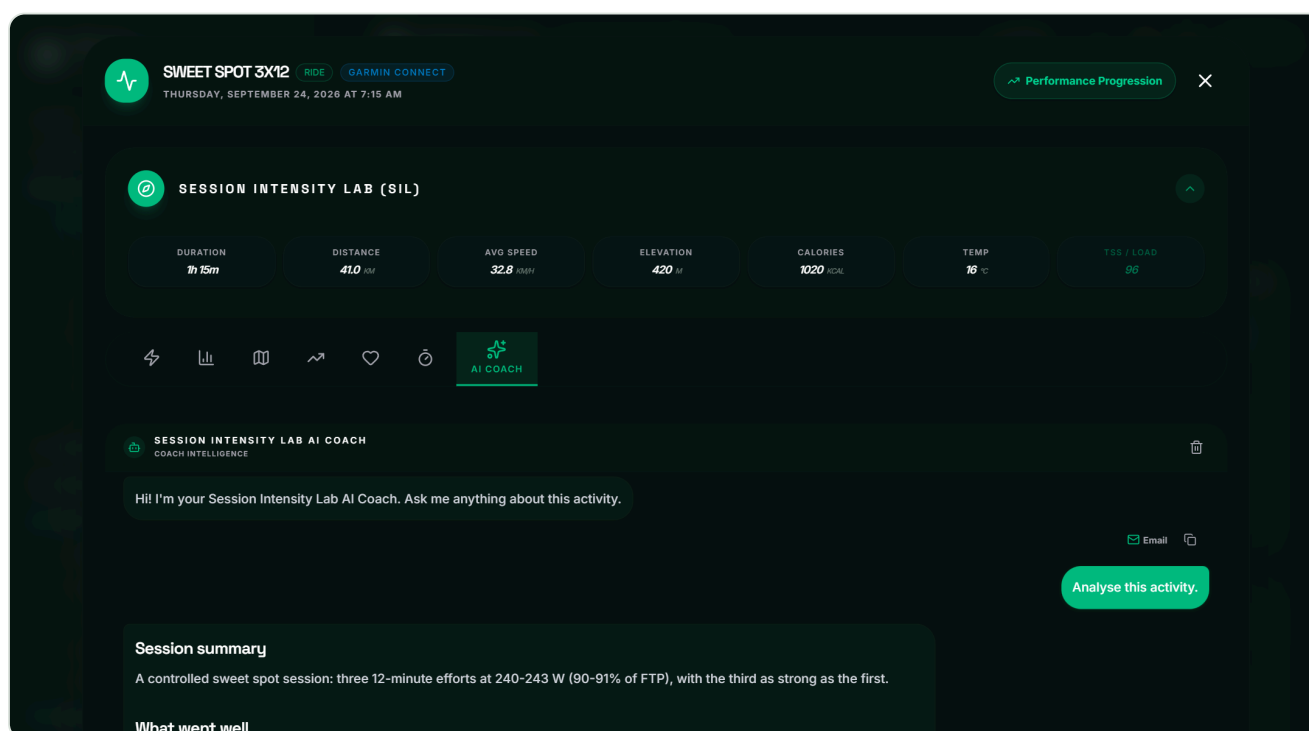

- You get a copy (CC).
- The subject is **MONTIS COACHING WORKFLOW REPORT – [ATHLETE]**.
- The email comes from noreply@montis.icu, so ask athletes to reply to you directly.
- Montis only sends to your own Intervals.icu email, or to the Intervals.icu email of an athlete you coach, as Montis knows it. Any other address is refused.
- The email always uses your current branding. Set your logo, website and brand colour in the hub at montis.icu/app (**Coaching** tab, **Your coach branding**).

6 Session Intensity Lab analysis email

Ask the AI Coach to analyse one of the athlete's activities in the Session Intensity Lab, then send the analysis to the athlete as an email with your branding.

1 Analyse an activity

1. Act as the athlete (section 2).
2. Open an activity: press **Analyse** next to a completed workout in the Coaching Workflow, or open **Skills** → **Session Intensity Lab** and pick one from the list.
3. Open the **AI Coach** tab (the last tab).
4. Choose a suggestion such as **ANALYSE ACTIVITY**, or type your question. Here the AI Coach doesn't start by itself.

The Session Intensity Lab's AI Coach tab with an analysis of Lena's sweet spot session. An example answer.

The AI Coach sees the activity's thresholds, power, heart rate and load; the power, heart-rate and pace curves; segments, intervals and repeatability; and the zone histograms. The other tabs show the activity itself: **Metrics**, **Intensity**, **Route Lab**, **Power Curve**, **HR Curve**, **Pace Curve**, **Segments** (Strava activities only) and **Intervals**.

2 Email the analysis

1. Under the answer you want to send, press **Email**. This only shows while you act as an athlete.
2. **Email AI Coach Response to [athlete]** opens with the athlete's email address filled in, a subject (for example **Montis AI Coach Analysis – Sweet Spot 3x12**) and the message body: the AI Coach's answer. Add your own note or change anything.
3. Press **Send Email**.

Email AI Coach Response to Lena Brandt

ATHLETE EMAIL ADDRESS
lena.brandt@example.com

SUBJECT
Montis AI Coach Analysis - Sweet Spot 3x12

MESSAGE BODY (EDITABLE BEFORE SEND)

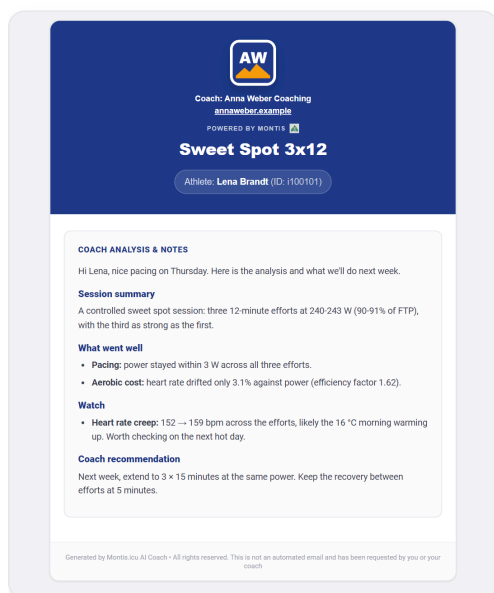

Hi Lena, nice pacing on Thursday. Here is the analysis and what we'll do next week.

Session summary
A controlled sweet spot session: three 12-minute efforts at 240-243 W (90-91% of FTP), with the third as strong as the first.

What went well
- **Pacing:** power stayed within 3 W across all three efforts.
- **Aerobic cost:** heart rate drifted only 3.1% against power (efficiency factor 1.62).

Cancel Send Email

The email composer. The message body can be edited before you send it.

The analysis email as Lena receives it.

What the athlete gets

Your branded header, the activity name, the athlete, and a **Coach Analysis & Notes** box with the message you sent.

Good to know

- Unlike the workflow report, you don't get a copy.
- The same address rules apply: your own Intervals.icu email, or the Intervals.icu email of an athlete you coach.
- The email comes from noreply@montis.icu, so ask athletes to reply to you directly.

7 Where to find more

- **In the Montis App:** **Help** → **Guide** → **Coaching Athletes** has every page of this guide, and search.
- **Inviting athletes:** [Coaching athletes with Montis.icu](#) (PDF) covers invite links, managing athletes, coach branding and privacy.
- **Your athletes elsewhere:** the same athletes work in ChatGPT and Claude through Montis.
- **Privacy and terms:** Montis [Privacy](#) · [Terms](#)
